

Thank you for purchasing a Snap Dragon Guitar. Here we'll help you look after your new guitar and make sure you get the best out of it for years to come.

## **PLAYING AND STORAGE**

You will have received two Velcro string tidies and a foam block with your Snap Dragon guitar. When playing your Snap Dragon guitar, all you need to do is remove the string tidy, and switch the neck into the playing position. When storing the guitar in the carry bag:

- 1) Put the Velcro string tidy on the neck loosely at the top, slide down the neck until secure.
- 2) Place the foam block just behind the bridge on your guitar. (this step is only necessary for travel)
- 3) Fold the neck to be parallel with the body and store in the case.

## **CHANGING STRINGS**

The first thing to remember is that your Snap Dragon is essentially no different from any other guitar you may own! If you look after it and maintain the strings and set up of the guitar, It will give you back hours of great playtime. We recommend .011-048 gauge strings for all our guitars (phosphor bronze for acoustic, Nickel for electric) .040-090 gauge for our Bass guitars, To change the strings.

- 1) Loosen the locking machine heads
- 2) Change the string, putting a small kink in the end to thread through the bridge/saddle
- 3) Thread string through captive nut and machine head with a small amount of slack, tighten locking machine head. (multiple winds are not preferable on a locking machine head and can cause tuning instability)
- 4) Tighten locking machine head and tune to pitch.

## **MANTAINING YOUR SNAP DRAGON**

You will have received some alan keys with your Snapdragon guitar

- large – for truss rod adjustment
- medium – for neck grub screw
- small – for saddle adjustment

**PLEASE NOTE** – If you bought any of our acoustic options (Mini TraXe, Snapaxe A, etc) You will not have received the small key.

All our guitars are set up before delivery by our in house tech. We recommend you only undertake in truss rod and saddle adjustments if you are confident with guitar maintenance.

Over time, the neck and strings can become unaligned. If the strings are too close to either edge of the fret board, this can be adjusted with the neck grub screw. If the strings are too close to the treble side of the fret board, using the black alan key, turn the screw clockwise. If they are too close to the bass side, turn the screw counter clock wise.
